SUMMARY

Computer Science student at University of Education Lahore with hands on internship experience in ERP implementation and CMS backend development. Proficient in Python, Java, C++, and JavaScript with strong command of RESTful APIs, OOP design patterns, MySQL, Firebase, and NoSQL databases. Delivered measurable results across both internships, reduced complaint handling time by 20% and automated backend modules cutting admin workload by 30%. Skilled in OpenCV, MediaPipe, Android Studio, Git/GitHub, and Linux. Ready to contribute to a Software Development, Backend Engineering, or AI/ML team as an intern or junior developer.

PROFESSIONAL EXPERIENCE

Software Development Intern | ERP Implementation Team

09/2024 – 11/2024

Askari Colony Management (ACM), Lahore 🔗

Lahore-Askari 10

- Assisted in deploying an ERP complaint management system across 10+ residential offices, streamlining maintenance request routing for technicians, plumbers, and electricians.
- Redesigned UI components and form workflows, contributing to a 20% reduction in complaint handling response time.
- Collaborated with stakeholders to gather business requirements and validate ERP module integration into daily operational workflows.
- Executed debugging, system testing, and defect resolution cycles; identified and resolved 15+ functional defects prior to go-live deployment.
- Automated manual maintenance request handling workflows, eliminating paper-based coordination across 3 operational departments.

Backend Development Intern | CMS Automation & Database Systems

03/2025 – 05/2025

Minhaj University Lahore, Lahore 🔗

Lahore

- Developed and automated 3 backend modules for the university CMS using Python and SQL, reducing manual administrative workload by 30% through streamlined data processing pipelines.
- Designed and implemented optimized SQL queries and schema structures, improving data retrieval speed for administrative records management by an estimated 40%.
- Applied OOP principles and REST API design patterns to improve maintainability and modularity of backend components across 2 production releases.
- Collaborated in a cross-functional Agile/Scrum team to test, debug, and deploy new features within defined sprint cycles.
- Performed system performance analysis and code optimization, identifying and resolving 3 critical bottlenecks in existing backend logic.

EDUCATION

ICS With Physics, Computer Science

01/2021 – 12/2022

Lahore College Boys Guldast Town

Lahore

COMPUTER SCIENCE(ADP), Computer Science

04/2023 – 07/2025

Minhaj University Lahore 🔗

Lahore

CGPA: 3.74

BS Computer Science(7th Semester)

08/2025 – Current

University Of Education-Division of Science and Technology 🔗

Lahore

CGPA: 3.65

SKILLS

Programming Languages

Python, Java, C++, JavaScript, HTML, CSS

Mobile Development

Android Studio, Firebase, XML Layouts

APIs & Integration:

RESTful API Design, Postman, JSON

DevOps (Basic Exposure)

CI/CD Concepts

Frameworks & Libraries:

Android SDK, React.js (basic), Node.js (basic), Spring Boot (basic), Pandas, NumPy, scikit-learn

AI / ML & Computer Vision

scikit-learn, TensorFlow, Keras, Pandas, NumPy, OpenCV,MediaPipe, Logistic/Linear Regression, SVM, KNN, Decision Trees,Random Forest,CNN, RNN

Tools & Databases

Git/GitHub, Linux, VS Code, MySQL, Oracle 21c, Database Design,FireBase, Office 365

CERTIFICATIONS

Python Essentials 1 & 2
Issuer: FreeCodeCamp

Advance SQL Hard Certification
Issuer: Skill Certify

Prompt Engineering for ChatGPT
Issuer: Coursera

Web Development Fundamentals
Issuer: IBM SkillsBuild

C++ Essentials 1 & 2
Issuer: FreeCodeCamp

Introduction to Networks (CCNA 1)
Issuer: Cisco Networking Academy

Software Development Lifecycle (SDLC)
Issuer: Coursera

Pitman International & Global Training Centres-English
Year: 2024

DEVELOPMENT PROJECTS

For Live Preview/Code Of My Projects Visit My Portfolio
[My Portfolio](#) 

Projects

Brightness Control Using Hand Gestures | Python, OpenCV, MediaPipe, Computer Vision

Real time gesture controlled system that maps hand landmark positions to system brightness levels using MediaPipe hand tracking and OpenCV frame processing.
Achieves sub-100ms response latency on standard hardware.

Gender and Age Detection System | Python, OpenCV, Deep Learning, Image Processing

AI powered facial analysis application using pre trained deep learning models to classify gender and estimate age from live webcam or image input with 85%+ accuracy on test samples.

Bank Management System | Java, MySQL, OOP, Data Structures

Full-featured banking application supporting customer account creation, deposits, withdrawals, and transaction history with a normalized MySQL schema handling 5+ concurrent account operations.

CRM System | Python, MySQL, OOP, CRUD Operations

Customer relationship management platform for lead tracking and customer records management, featuring full CRUD operations, search/filter workflows, and a CLI-based interface.

Node.js Security Project | Node.js, OWASP, Web Security, Vulnerability Assessment

Security testing environment built to analyze and document 5+ common OWASP web vulnerabilities including XSS, SQL Injection, and broken authentication, with documented mitigation strategies.

AI & MACHINE LEARNING PROJECTS

- Built and evaluated supervised ML models for disease prediction, **stock price forecasting**, and customer segmentation using Logistic Regression, Linear Regression, KNN, SVM, Decision Trees and Random Forest..
- Developed a **breast cancer detection model** using CNN and RNN architectures with TensorFlow/Keras, achieving classification on labeled medical datasets.
- Engineered NLP pipelines with tokenization and TF-IDF vectorization for **spam detection** and multi-class text classification tasks.
- Designed and benchmarked **CNN models for image classification** on the MNIST dataset, optimizing layer architecture for strong validation accuracy.
- Built a **real estate price prediction** system and stock price forecasting model using regression techniques and time-series analysis.
